

## Soccer - Sending a game file (*gameid.SGM*)

To send a soccer game file to the conference office or to another team, include the game file as an email attachment:

1. Select the "attach file" function
2. Locate your current soccer games directory (for example, `c:\tasso\2000`)
3. Attach the *gameid.SGM* file
4. Attach the *gameid.SPL* file (optional - if you want to include the play-by-play)
5. If needed, set the email attachment options in your email software to send attachments "as is" or "binary" -- consult your email software vendor for questions

When you receive a game file, use the Utilities import function to include the game in your current games directory:

1. Save the *gameid.SGM* attachment to a working directory (such as `a:` or `c:\temp`)
2. Run the DOS UTILITIES program
3. Select File maintenance | Import/Export
4. Select the Import game file function
5. Point to the working directory where you saved the attachment
6. Select the *gameid* from the Games List
7. The game file is imported into your current games directory.
