

How to Install Software via Download from the Stat Crew Store

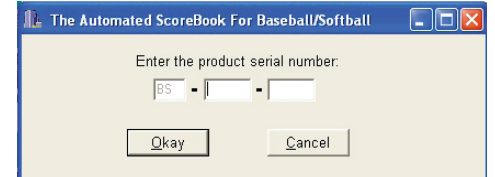

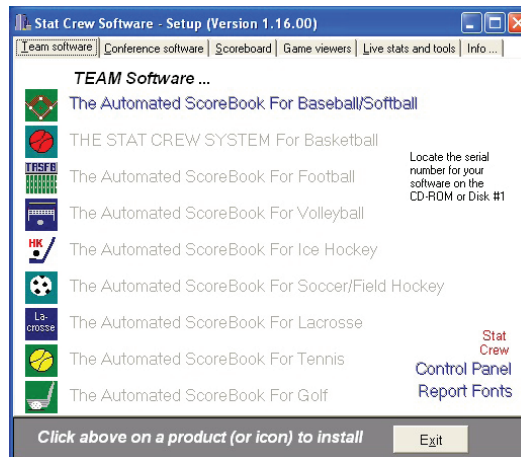

1. After completing your order of software for download, click on the line: **“Click here to download this product”** to begin the download process. Save the file to your desktop or in a folder you can find from the Run prompt.

2. To begin the installation process, you must run the download file. The Stat Crew Software Setup window will then be displayed.

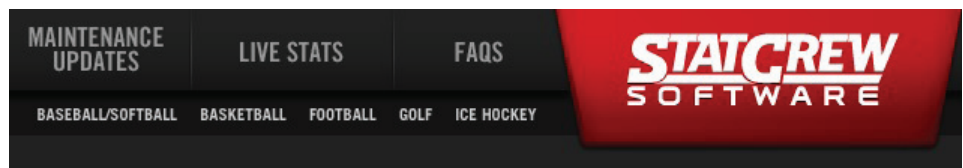

3. At the Setup window, click on the product highlighted. When prompted, enter the serial number that was provided on the store page (and in the shopcart email) and click OK. To complete the installation process, proceed through the various prompts. Note this will overwrite an older version of that product, if one exists on the computer.

4. You can also install other Stat Crew Software products from the Setup window, such as the Stat Crew Control Panel, Game Viewers, and Tools.

5. If returning to the site, or not immediately ready to download, go to the Stat Crew Store site. After successfully logging in, navigate to ACCOUNT | View My Products. Then download and install The Automated ScoreBook (TAS) version(s) purchased.
